

2002 10 09 Wednesday Roger Leir

UFO Symposium

ROGER LEIR

AB: "Dr. Roger Leir is the first person to ever remove an alien implant from a human being – that's who Dr. Leir is – he's a podiatrist."

RL: January 20, 1996 in Varginha, Brazil – a craft was seen coming down early in the morning. Reportedly there was witness intimidation by the Brazilian military (per RL's conversation with Brazilian medical personnel six (6) years after the occurrence).

RL: "An autopsy did not take place – what took place was a treatment of this alien being."

AB: "Now wait a minute, you're saying the alien was alive?"

RL: "It was alive ... with a compound fracture of the leg."

RL: "The being was described as being less than five (5) feet in height. It had a dark brown skin that was smooth, oily, but reticulated (like a reptile). Felt ... very smooth ... with no noticeable odor."

\* \* \*

"The head was large in comparison to the body with a very thin neck."

"Eyes were very large ... red in color with no discernible pupil."

"The arms were thin ... four (4) fingers – elongated [and] multiple-jointed. No thumb."

"Three (3) fleshy toes, narrow, no particular arch, and one additional hanging toe."

"Bones of the alien had a tensile strength about ten times that of a human bone."

"Blood is very, very similar to our blood. Red in color ... Platelet count much, much higher than ours."

\* \* \*

RL: "Everything healed in *24 hours* – the bone and the soft tissues."

\* \* \*

RL: Military guards tried not to look the alien in the eyes – the guards did not feel comfortable [doing so].

RL: The hospital room of the alien began filling with green mist. "They finally figured out it was coming from the alien." Unsure if toxic or even what was going to happen ...

\* \* \*

RL: Telepathic message from the alien: "A human being was a being that was totally disconnected from its spiritual self."

RL: Absolutely no doubt that this human-alien interaction actually happened.

RL: "When this being left this facility it was in satisfactory medical condition."
